

panSarin commented on 16 Apr 2013

Shouldn't it work also for string fields that have nil value at begining, and after update record f.e. from form field became ". This is a bug , or a delibrate behavior?

Ruby on Rails member

Please don't ask question in the issues tracker. If you have doubts about a behavior ask in the Rails Core mailing list.

Also, please add more information in your question. Right now it is very hard to know what you are asking.
